Bid Round 65

SITE NAME: Middleton Graber Highlands LLC (Former Speedway Sand & Gravel)
COMMERCE #: 53562-1002-00
BRRTS #: 02-13-550557

Q: Is the bid document assurance and checkbox applicable to this bid document, I noticed it is not the same as your other bid which has that language in this round?

Yes, and thanks for the question. The bid document assurance and checkbox template language are inserted to the bid document as part of the Question & Answer bid process.

Q: Is the excavation area accessible as is or is clearing & grubbing of trees, brush, etc. required?

The excavation area is accessible. There are a few very small saplings, but no large trees or brush.

Q: How many reports do you want during the two years of groundwater monitoring?...quarterly, semi-annually, annually, or one report at the end?

Reporting shall be per the NR 700 rule series, Comm 47, and Comm 46 requirements.

Q: What do you want included in each groundwater monitoring report?... flow maps, historical data tables, plume maps, other?

Reporting shall be per the NR 700 rule series, Comm 47, and Comm 46 requirements.

Q: What volume of pumped water should we use to calculate costs?

We're bidding the potential activity of pumping water as an 8- hour day for a pump truck and an operator. The hourly rate shall be used for determining the costs estimate. This all depends on the skill of the excavator, capacity of the pump truck, turn around times, weather, traffic, and so forth. The goal is to remove water from the excavation in order to make it feasible to excavate contaminated soil to the desired excavation footprint, not to remove x amount of groundwater from the excavation. Commerce shall approve the use and costs of the pump truck prior to work being conducted.
